SERIAL DATA TRANSMISSION

XON / XOFF - Protocol

The XON / XOFF protocol is used in "memory"-mode. The XON-code (HEX 11) indicates that the print module is ready to receive data. When XOFF-code (HEX 13) is shown the transmission of data has to be interrupted. To avoid possible data loss some information will be stored into the data-memory. When receiving, that the memory is empty the XON-code (HEX 11) will be shown again.

Connector assignment (9-pin DSUB socket)

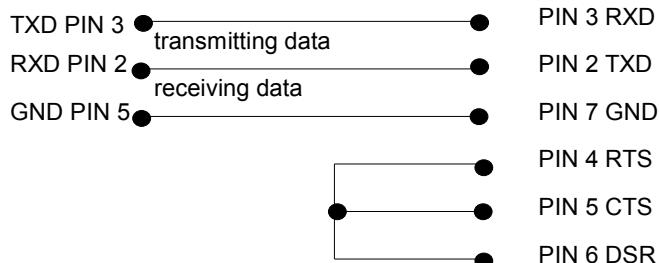

Pin	Signal	Beschreibung
2	R x D	Receiving data line
3	T x D	Transmitting data line
4	DTR	HW Handshake
5	GND	GND Signal

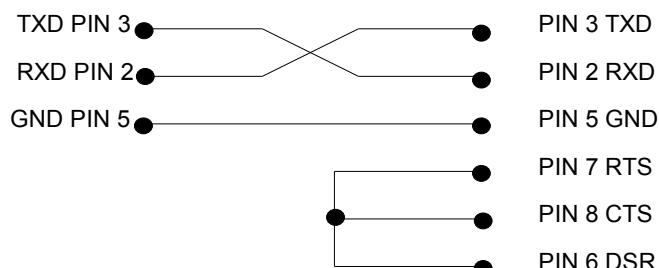

Connexion RS 232

Terminal assignment (cable)

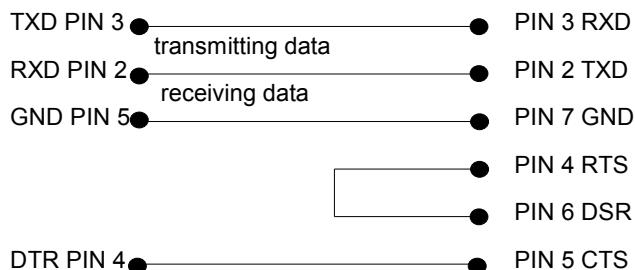

XON / XOFF - report: e.g. connection to an IBM-compatible computer

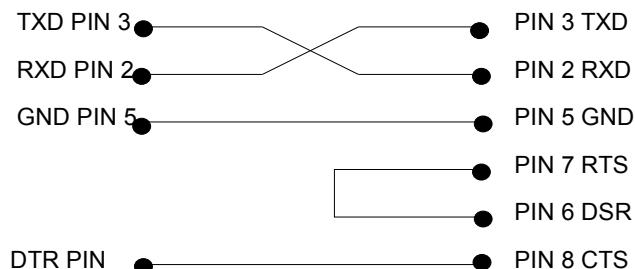

2. printer (DSUB 9-plug) PC (DSUB 9-socket)

Hardware handshake:

Connector assignment RS485 and RS422

9-pin DSUB socket)

PIN at DSUB socket	Function RS422 (full duplex)	Function RS485 (semi duplex)
1	GND	GND
2	n/c	n/c
3	n/c	n/c
4	RxD-	n/c
5	RxD+	n/c
6	n/c	TxD (RxD)-
7	n/c	TxD (RxD)+
8	TxD-	n/c
9	TxD+	n/c

PARALLEL DATA TRANSMISSION

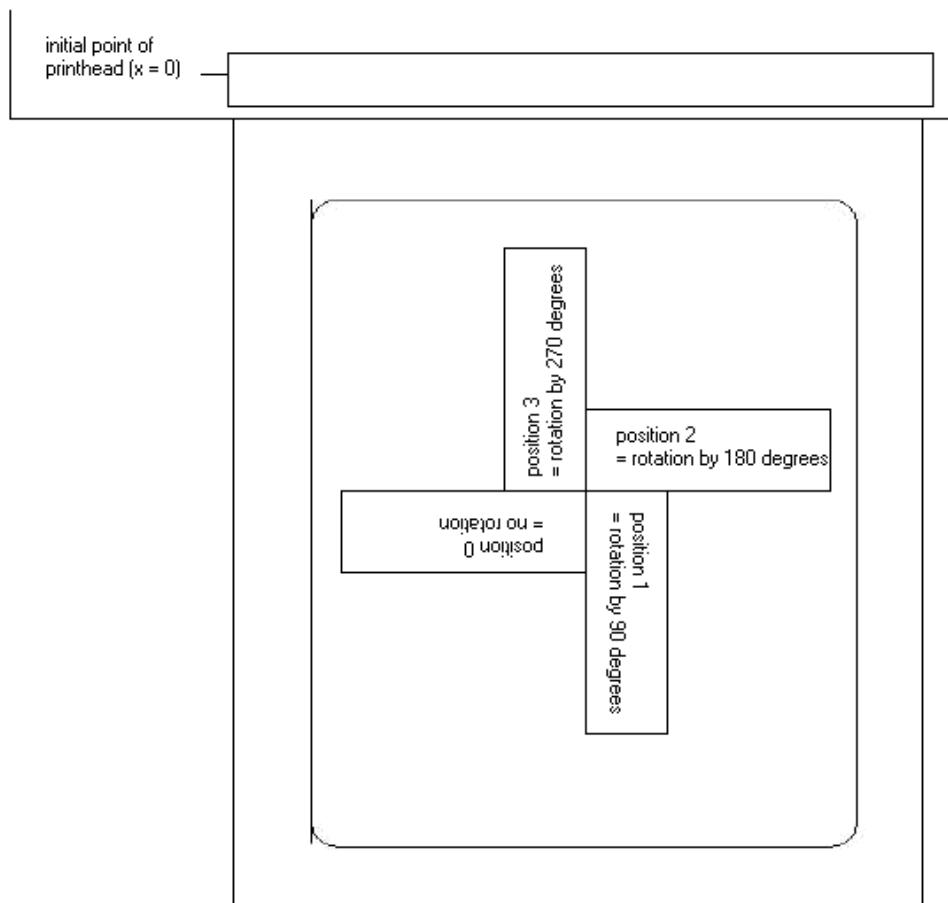

Interface:	parallel Interface
	synchronising with STROBE - signal
	handshake with BUSY - signal
	all signals are TTL - compatible
Connection:	AMPHENOL - plug 57-30360
PIN 1	In regular condition, this signal is in "HIGH" position. With decreasing amplitude the data acceptation is completed from DATA 1 DATA 8.
PIN 2 . . . 9	DATA 1 DATA 8 parallel data information
PIN 10	<u>ACKNLG</u>
PIN 11	In regular condition this signal is "LOW". With decreasing amplitude of STROBE- signals, BUSY will change onto "HIGH" - level. This level will stay as long as the print module is busy with the already received data byte.

Connection

AMP 36 (Centronic's socket)

Signal Pin-No.	Signal name	Direction	Function
1	<u>STROBE</u>	(input)	The <u>STROBE</u> signal indicates that data can be received. The impulse width to the receiving line has to be 0,5 µs at least.
2	DATA 0	(input)	
3	DATA 1	(input)	
4	DATA 2	(input)	
5	DATA 3	(input)	
6	DATA 4	(input)	
7	DATA 5	(input)	
8	DATA 6	(input)	
9	DATA 7	(input)	
10	<u>ACKNLG</u>	(output)	An impulse of approx. 12 µs confirms data input for a LOW level and signalises the further listening watch of the print module.
11	BUSY	(output)	A HIGH level indicates that the print module cannot receive any data. On the following conditions the signal HIGH is possible: 1) for data input (impulse for each sign) 2) during a printing process 3) in Offline status 4) for print module failures
12	PE	(output)	A HIGH level indicates that paper is used up.
13	SELECT	(output)	High Online
14	AUTOFEED		
15	GND		
16	GND		Signal ground.
17	CHASSISGND		Mass, not connected with signal ground.
18	+ 5V		Approx. 4,8 V (max. 100mA)
19-30	GND		Return conductor for twisted pair conductors.
31	not used		-
32	<u>FAULT</u>	(output)	Signal goes to LOW, in case 1) the paper is used up 2) the print module is Offline or 3) an error occurs.
33	not used		
34	not used		
35	not used		
36	not used		

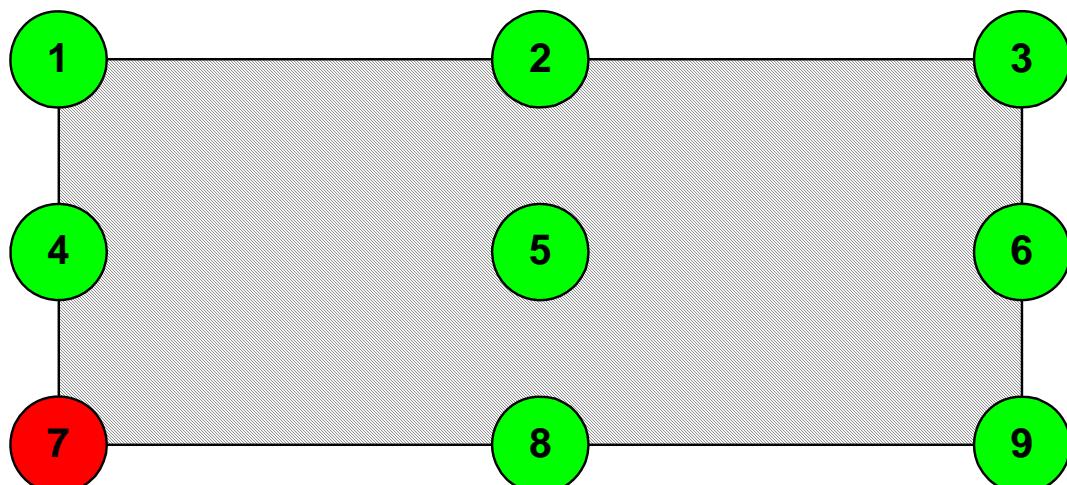

ROTATION OF TEXT, CODE AND GRAPHIC

DATUMPOINT

The so-called datumpoint is the relation point for indication of position. In the meantime the datumpoint is also the point at which the selected object is rotated.

To determine the datumpoint in the mask sets, the possible datumpoints are numbered from left top (1) to right bottom (9). The default datumpoint is left bottom (7). This datumpoint is also used even if no indication is found in the mask set.

DATA FORMAT

The format of data consists of 4 parts, the mask part, the text, the code (if necessary) and the command part.

For a n-line layout the following has to be transmitted:

- n mask sets
- n text sets
- n graphic sets (if necessary)
- 1 command set

The command set always has to be transmitted at the end!

To each text on a layout belongs one MASK SET and one TEXT SET with the same field number.
To each code on a layout belongs one MASK SET, one TEXT SET and one CODE SET with the same field number.

To each box or line on a layout belongs only one MASK SET.

To each graphic on a layout belong several GRAPHIC SETS according to its size res. height, e.g. a graphic with a height of 10 mm needs 80 graphic sets.

Examples:

layout with 3 lines text:	3 mask sets 3 text sets 1 command set
layout with 3 lines text and 1 code:	4 mask sets 4 text sets 1 code set 1 command set
layout with 2 lines text, 1 box and 3 lines:	6 mask sets 2 text sets 1 command set

For all data sets the following is valid:

Each set starts with: **SOH = start of header** → HEX format 01

and ends with: **ETB = end of data transmission block** → HEX format 17

Alternatively it is possible to set SOH to 5E_{Hex} and ETB to 5F_{Hex}. This is necessary if the connected system (e.g. UNIX) cannot transfer control signs.

All other data sets → ASCII format, but they will be transmitted as hexadecimal characters.

Example: A = identification of mask set - transmission: 41_{HEX}
 n = field number '01' - transmission: 30_{HEX}, 31_{HEX}

Explanations

x coordinate:	distance from right layout rim in mm is measured from the right layout rim up to the lower left point of the corresponding line		
y coordinate:	distance from upper layout rim in mm is measured from the beginning of the layout down to the lower left point of the corresponding line		
Bitmap fonts not proportional:	bitmap fonts - not proportional (Matrix – mm) 01 = FONT 01 0,8 x 1,1 mm - 127 characters 02 = FONT 02 1,2 x 1,7 mm - 255 characters 03 = FONT 03 1,8 x 2,6 mm - 255 characters 04 = FONT 04 4,0 x 5,6 mm - 127 characters 05 = FONT 05 1,8 x 3,2 mm - descender - 255 characters 06 = FONT 06 1,5 x 2,9 mm - 127 characters 07 = FONT 07 1,2 x 2,2 mm - descender - 255 characters		
Bitmap fonts proportional:	bitmap fonts – proportional 21 = FONT 21 1,0; 9 (1,0; 13) - 255 characters 22 = FONT 22 1,8; 14 (1,8; 21) - 255 characters 23 = FONT 23 2,6; 21 (2,6; 31) - 255 characters 24 = FONT 24 5,6; 45 (5,6; 67) - 255 characters 28 = FONT 28 4,0; 32 (4,0; 48) - 255 characters 29 = FONT 29 0,8; 6 (0,8; 9) - 255 characters		
Vector fonts proportional text:	When in mode "proportional text", the height and width of text have to be entered in mm. These values refer to the capital "M", i.e. the values of other characters are changing in proportion.		
Vector fonts autoscale:	When in autoscale mode, height and width of text has to be entered in mm. The height of the text refers to all capital letters. When using small characters and descenders the height is changing in proportion. When entering the width, the complete file has to be considered. The text will be adjusted automatically, which means that the width of the characters is changing.		

Definition of field attributes/field properties (optional)

Explanation: Additionally to mask set 'AM[] ...' the possibility was created to define further field properties. In order to achieve a high flexibility, the field properties received own names/identifications. Therefore the sequence as well as the number of field properties are free. If necessary, the mask set 'AC[]' is transferred additionally to mask set 'AM[]' to the printer.

Structure mask set: (SOH)AC[]at1=value;at2= value;...(ETB)

Attribute (at):	Description
BT BW QZ	ITF 14 (see chapter 'Mask set ITF code') Bearer bar type Bearer bar width Quiet zone in 1/100 mm
NAME	Field name (see page 10) Definition of field name
FN	Field number (see page 11) Free definable field number
BGND FGND	Foreground and background (see page 12) Background of field Foreground of field

This table is constantly extended. The current version is available on demand.

Field names

Application (customized)

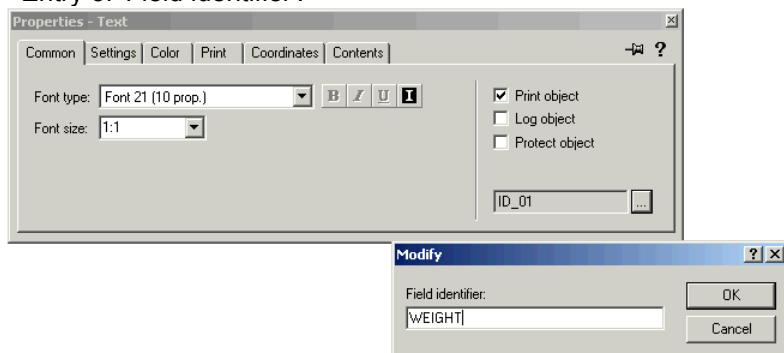

1. The label is created with Labelstar Office/Labelstar PLUS.
2. Label data are saved on memory card of printer.
3. An external control (SPS, balance, ERP system, etc.) modifies variable fields of the label (e.g. weight, article no., batch no., etc.) and starts the print of label.

Explanation (Labelstar PLUS only)

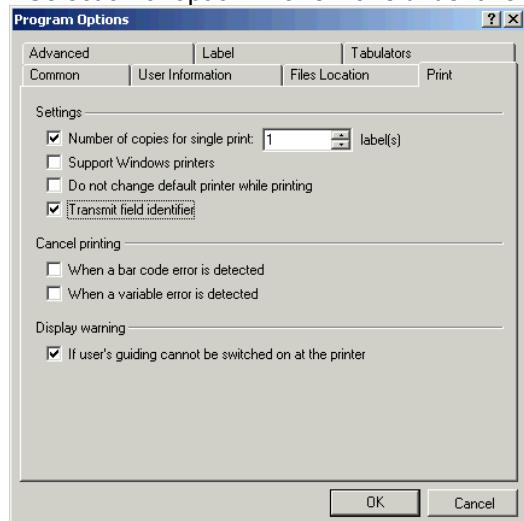

So far the fields were designated by numbers (1, 2, 3, ...) which were determined by the order of creation in Labelstar PLUS. By later modifications of label, these field numbers were possibly changed whereby the access to a certain field was no longer possible. By the field names this dependence is annulled.

Procedure - Labelstar PLUS

- a) - Entry of 'Field identifier'.

- Selection of option 'Transmit field identifier'.

- b) Save label on memory card of printer.
- c) The external control loads first the saved label from memory card of printer with **(SOH)FMB---rF(ETB)**
See chapter 'Memory card'.
- d) With text set **(SOH)BV[NAME]...(ETB)** the contents of field is determined.
- e) With parameter set **(SOH)FBC---rS-----(ETB)** the print is started.
See chapter 'printing'.

Procedure - Labelstar Office

- a) The names of field identifiers are assigned and transferred automatically from Labelstar Office to the printer.
- b) Save label on memory card of printer.
- c) The external control loads first the saved label from memory card of printer with **(SOH)FMB---rF(ETB)**
See chapter 'Memory card'.
- d) With text set **(SOH)BV[NAME]...(ETB)** the contents of field is determined.
- e) With parameter set **(SOH)FBC---rS-----(ETB)** the print is started.
See chapter 'printing'.

Field selection by free definable field number

With the following described attribute it is possible to assign a free definable field number to a field. This field number does not have to be clear, i.e. several fields can have the same field number. In this way the same field contents can be assigned to different fields.

The following attribute identification is defined:

Attribute	Description
FN	free definable field number

After the field number was assigned with AC mask statement,

(SOH)AC[n]FN=nr(ETB)

n = field index

nr = free definable field number

it is possible to access to the field and/or the fields with the new BF text statement:

(SOH)BF[nr]text(ETB)

nr = field number

text = field contents

Example

```
// Assignment of field number for field 1 and field 2
(SOH)AM[1]1000;2500;0;4;2;7;400;400;0(ETB)
(SOH)AC[1]FN=100(ETB)
(SOH)AM[2]2000;2500;0;30;2;4000;9;3;0;1(ETB)
(SOH)AC[2]FN=100(ETB)

// Access to field 1 and field 2 by field number
(SOH)BF[100]1234567890(ETB)
```

Foreground and background

For following objects/fields the foreground and background can be specified explicitly:

- Bitmap text (only foreground)
- TrueDoc text (only foreground)
- Graphic from memory card (only foreground)
- Line (only foreground)
- Rectangle (only foreground)
- QR Code (only foreground)
- GS1 DataBar (RSS) (only foreground)
- CODABLOCK (only foreground)
- DataMatrix (only foreground)
- PDF417 (only foreground)
- CODABAR (only foreground)
- Code 128 (only foreground)
- Code 2/5 interleaved (only foreground)
- Post Leitcode (only foreground)
- Post Identcode (only foreground)
- ITF 14 (only foreground)
- Code 39 (only foreground)
- Code 39 etended (only foreground)
- Code 93 (only foreground)
- EAN ADD ON (only foreground)
- EAN 13 (only foreground)
- EAN 8 (only foreground)
- GS1-128 (only foreground)
- Pharmacode (only foreground)
- PZN Code (only foreground)
- UPC A (only foreground)
- UPC E (only foreground)

The following attribute identification is defined:

BGND	Background of field
FGND	Foreground of field

The following values can be assigned to the attributes:

0	black
1	white
2	inverted
3	transparent
4	standard

black: The field contents is generated in black onto the label (previous standard).

white: The field contents is generated in white onto the label.

inverted: The field contents is generated inverted to the background onto the label.

transparent: The field contents is generated transparent onto the label – no change of contents that is generated till then.

If the attribute for the background is set, this effects on all fields within this range, generated so far. With the selection of white or black the fields beneath are covered. If inverted is selected then they change their color.

The attribute value for the foreground always refers to the current background. If no attribute is explicitly set, all generated fields so far in this sector are regarded as background.

At the generation, always the first attribute for the background (if set) and then the attribute for the foreground (if set) is processed.

Example:

```
// Creation of field for bitmap text
(SOH)AM[1]2000;5000;0;1;0;21;2;2;50;7(ETB)

// Text field contents
(SOH)BM[2]Inverted text(ETB)

// Invert text field
(SOH)AC[2]BGND=3;FGND=2(ETB)
```

: graphic data in PCX format

⊗: SOH (1_{hex} bzw 5E_{hex})

⊕: ETB (17_{hex} bzw. 5F_{hex})

^C_R: CarriageReturn (0D_{hex})

^L_F: LineFeed (0A_{hex})

GRAPHIC

General graphic format

This format is supported by all our print modules but note that a 8 bit transmission is absolute necessary.

SOH	D	p	p	p	p	lb	lb	lb	b	b	b	gb.....	ETB
												

	=		min.	max.
D	=	identification for graphic set		
p	=	pixel line from above	'0000'	'1900'
lb	=	1. byte from left	'000'	'100'
b	=	quantity of bytes	'1'	'100'
gb	=	graphic bytes		

Graphic byte:

1 graphic bit = 0,083 x 0,083 mm

Graphic in PCX format

It is possible to transfer graphic data as a PCX-file (e.g. PaintBrush) to the print module. With this type of data transfer the PCX-file is transferred in a compressed form. Hereby the RLE-procedure is used and therefore the graphic data were reduced by approx. 30 %. This means that the effective transferring time for 300 dpi print modules is cut in halves.

To set the print module ready for receiving PCX-data the protocol has to be switched over and hereby the following command set will be defined:

SOH	A	X	n	n	n	y	y	y	y	x	x	x	x	x	m	dp	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	----	-----

n	Index of transferred graphic to print module internal maintenance at present not processed (000)															
y	Y coordinate of graphic in 1/100 mm															
x	X coordinate of graphic in 1/100 mm															
m	Mode 0 = standard Mode 1 = transparency Mode 2 = inverse Mode 3 = inverse transparency															
dp	Datumpoint 1 = left top 2 = centre top 3 = right top 4 = left centre 5 = centre centre 6 = right centre 7 = left bottom (default) 8 = centre bottom 9 = right bottom															

- It is recommended to observe that directly after the final sign (ETB) no separator res. fill character such as $\text{C}_{\text{R}}^{\text{L}}\text{F}$ is indicated.
- The print module supports the following PCX versions: 5, 3, 2 and 0.
- It is necessary that the corresponding PCX-file is available as monochrome (black/white).
- The graphic has to be available in the original size as the print module is not able to change the size by itself.

Before print start, indicated by parameter set 'FBC', the definition of field number, lines and pieces has to be effected via the parameter sets (FBA res. FBB).

Example of PCX file

VARIABLES

Set structure

SOH	BM	[n]	=	v	v	(p1	p2	p	pn)	t1	t2	t	t70	ETB

The grey marked part corresponds to the variable definition. The text entered from t1 to t70 is added to the function result of variable.

- = start of function
- vv variable type
 - SC link field
 - CN counter
 - CC extended counter
 - CL date/time
 - CU currency variable
 - SH shift variable
 - UG user guiding
 - MD memory card data
- (start of variable parameter block
- p1...pn variable parameter
-) end of variable parameter block

Note: In case you want to print a text which corresponds exactly to the variable definition then you have to place '!' before.

SOH	BM	[n]	!	=	v	v	(p1	p2	p	pn)	t1	t2	t	t70	ETB

Link field

SOH	BM	[n]	=	S	C	(p1	;	p2	;	p	;	pn)	t1	t2	t	t70	ETB

- = SC identification of link field
- p1...pn identification of link elements (field number or constant text)
 - field number is entered without leading '0'
 - constant text is included in " but these marks are not printed

Note: Reference fields can be constant text or variables but no link fields.

Example: = SC (1; 2; 3) print: field1field2field3
 = SC (1;"constant"; 2) print: field1constantfield2

Counter

SOH	BM	[n]	=	C	N	(t	;	m	;	c	;	+/-	s	;	i	;	h	;	r)	t1	t2	t	t70	ETB
-----	----	-----	---	---	---	---	---	---	---	---	---	---	-----	---	---	---	---	---	---	---	---	----	----	---	-----	-----

= CN identification counter

t type of counter

0 numerical

1 letters only

2...36 radix, base of the counter

m function mode of counter

0 standard

1 return to start value

2 enter the start value at the beginning of printing
(default = existing start value)

3 enter the start value at the beginning of printing
(default = last final number)

4 reset start value at cycle end
(only for DPM IIIi)

5 reset start value by I/O signal

6 time-controlled resetting

7 time-controlled resetting with input of initial value
(default = last final value)

c digit where the numbering starts counting

+/- direction

+ adding

- subtracting

s step width

i update interval

(number of labels with identical number)

h time by which the counter is reset (function mode 6 and 7) in format 'HH:MM'

e.g. 00:00 = reset counter at 0:00

(optional, only for function mode 6 and 7)

r reset value

(optional, only for function mode 6 and 7; default = text and/or initial value)

Limitation:

The time-controlled resetting of counter variable is only effected in case of an active print order. If a print order is cancelled before the specified time and afterwards again restarted then no resetting of counter value is effected.

t1, t2, ... text res. start value of counter

Example:

Entry: = CN (10;7;4;+1;1;06:00;0001)1234

The enquiry for the initial value is effected at print start and at 6:00 the counter variable is reset to value 0001.

Extended counter

SOH	BM	[n]	=	C	C	(+/-	s	;	i	;	m	;	z	;	n	;	x)	t	ETB
-----	----	-----	---	---	---	---	-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

= CC identification of numeric counter

+/- direction

+ counter adding

- counter subtracting

s step width

i update interval
(number of labels with identical number)

m function mode of counter

0 standard

1 return to start value

2 enter the start value at the beginning of printing
(default = existing start value)

3 enter the start value at the beginning of printing
(default = last final number)

4 reset start value at cycle end
(only for DPM III)

5 set min. / max. value

6 set start value

7 print end

z leading zeros

0 no leading zeros

1 printout with leading zeros

n minimum value (max. -99999999)

x maximum value (max. 99999999)

t start value

(the number of digits determines the format for the printout with leading zeros
(max. 99999999)

Example:

Entry: = CC (+1;2;5;0;1,999)0050

Print: 50, 51,...999, 1, 2, ...

Date / Time

SOH	BM	[n]	=	C	L	(m	;	d	;	i	;	n	;	c	;	mo	;	pd	;	pm	;	md	;	mm	;	rw	;	ws)	t1	t...	t70	ETB
-----	----	-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	----	---	----	---	----	---	----	---	----	---	----	---	----	---	----	------	-----	-----

= CL identification date/time

m month offset to the actual date

d day offset to the actual date

i update interval (0 = at the beginning of a print order, 1 = each label)

Optional parameters

n minute offset to the actual time
(negative entry/value possible)

c correction month overflow (0 = change to the next month, 1 = remain in current month)

Optional parameters for BBE date

mo	entry mode	0:	standard; display current date of real time clock
		1:	display calculated date, modification possible
		2:	display calculated date, no modification possible

pd max. positive correction days

pm max. positive correction months

md max. negative correction days

mm max. negative correction months

Optional parameters for rounded date

rw rounded weekday: 1 = Sunday ... 7 = Saturday; 0 = no rounding

ws start of week, format: "D-HH:MM", e.g. 1-00:00 = Sunday, 0:00 Uhr

Examples:

Actual date as per Real Time Clock: 25.02.08

Entry:	= CL (0;0;0)<DD.MO.YY>	Print:	25.02.08
Entry:	= CL (1;1;0)<DD.MO.YY>	Print:	26.03.08

Example for BBE date

Entry:	=CL (0;0;0;0;0;1;3;2;3;2)<DD.MO.YY>	At print start the calculated date is displayed at the printer and can be modified (+/- 3 days and +/- 2 months):
--------	-------------------------------------	---

Display:

ID_01	DD:MO:YY
	25:02:08

Example for rounded date

The beginning of the week is on Sunday at 00:00. The date of Monday should be printed the whole week.

Entry: =CL (0;0;0;0;0;0;0;0;0;2;1-00:00)<DD.MO.YY>

Current date	Rounded date
23.02.2008 23:59:59	18.02.2008
24.02.2008 00:00:00	25.02.2008
25.02.2008	25.02.2008
01.03.2008 23:59:59	25.02.2008
02.03.2008 00:00:00	03.03.2008

Format identifier

Standard format	
HH	Hours 2-digit (24 hours)
HE	Hours 2-digit (12 hours)
MI	Minutes 2-digit
SS	Seconds 2-digit
AM	AM/PM output
DD	Day 2-digit
MO	Month 2-digit
YYYY	Year 4-digit
YY	Year 2-digit
Y	Year 1-digit
WW	Calendar week
DW	Day of week (Sunday = 0)
DW1	Day of week (Sunday = 1)
DwX	Day of week For x it is possible to enter any ASCII character from which is counted continuously
DOWxxxxxxxx	Day of week - variable For x it is possible to enter any ASCII character The first ,x' denotes Sunday, the next denotes Monday and so on until Saturday For each weekday a character must be created
DOY	Day of year 3-digit (First January = 1)
DY	Day of year 3-digit (First January = 0)
Examples	
DD.MO.YY	10.09.06
MO/DD/YYYY	09/10/2006
YY-MO-DD	06-09-10
YYMODD	060910

The format identifier 'HE' and 'AM'/'am'/'Am' are supplemented. Therefore the output of hours in 12-hours mode is possible. By the additional output of format identifier 'AM' the output of time in american/english format is possible.

Examples:

=CL(0;0;0;0)<HH:MI:SS>	->	15:30:00
=CL(0;0;0;0)<HE:MI:SS>	->	03:30:00
=CL(0;0;0;0)<HE:MI:SS AM>	->	03:30:00 PM
=CL(0;0;0;0)<HE:MI:SS am>	->	03:30:00 pm
=CL(0;0;0;0)<HE:MI:SS Am>	->	03:30:00 p.m.

By separating the output of time and AM/PM output in 2 text fields, also the following output format is possible:
03:30:00 pm

Extended format	
XMO	Name of month short
XSO	Name of month long
XSD	Weekday short
XLD	Weekday long
For X you can enter the country identification of desired language	
C	= Canadian
D	= Danish
E	= English
F	= French
G	= German
I	= Italian
N	= Dutch
O	= Norwegian
S	= Spanish
U	= Finnish
W	= Swedish
Examples:	
DD.EMO.YY	10.SEP.06
DD.ESO YYYY	10. September 2006
ELD,DD.GMO.YY	Sunday, 10. SEP.06
ESD,DD.MO.YY	DO, 10.09.06

Currency variable

SOH	B	n	n	=	C	U	(a	;	b	;	c	;	d	;	e	;	f	;	g)	t1	t2	t	...	t70	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	----	----	---	-----	-----	-----

- = CU Signification of variable Euro
- a ANSI-Code of thousand separator as decimal figure
- b ANSI-Code of comma separator as decimal figure
- c Quantity of numbers after the comma as decimal figure
- d Operand A Before the processing the variable Euro calculates the term
- e Operand B $\frac{A \times B}{C}$
- f Operand C
- g Rounding format
- t1, t2, ... Format string, is indicated by "< >"

Example:

In case the contents of field 20 has to be converted from USD into EUR the definition of variable for the user defined format is as follows:

B01 "=CU(46;44;2;20;"1,0";"0,68861";"0,01")Result: <>Euro"
 B20 1.250,44 USD

Printout: 1.250,44 USD
 Result: 1.815,89 Euro*

* 1 USD = 0,68861 Euro (11.01.2010)

Shift variable

SOH BM [n] = S H () t1 t2 t... t70 ETB

= SH identification of shift variable

Note: The shift variable did not need any parameters. The settings for the output are defined with the corresponding parameter sets. (see above)

Set shift times

SOH F C I D - - r N N H H M M h h m m ETB

NN = ID [01 ... 24]

HH = start hour

MM = start minute

hh = end hour

mm = end minute

Enquire shift times

Answer

ANSWER: SOH A N N H H M M h h m m p p p p p p p p ETB

Set shift text

SOH F C I E - - r N N T T T T T T T T T T T T T ETB

NN = ID [01 ... 24]

T = max. 10 characters

Enquire shift text

SOH F C I E - - w N N N p p p p p p p p p p ETB

Answer

SOH A N N : T T T T T T T T T T T : p p p p p p p p p ETB

User guiding

SOH	BM	[n]	=	U	G	(c	;	t	;	m	;	ap	;	ae	;	sp)	t1	t2	t	t70	ETB	...
-----	----	-----	---	---	---	---	---	---	---	---	---	---	----	---	----	---	----	---	----	----	---	-----	-----	-----

= UG identification user guiding

c start position for the entry

t type of entry

0 numerical

1 alphanumerical

m mode of entry

0 do not jump over special characters

1 jump over special characters

ap alignment print

0 aligned to the right side

ae alignment entry

0 aligned to the right

sp prompt text for the variable, max. 24 characters

The entry has to be included in ".

Example:

Entry: = UG (1;0;0;0;0;"Enter article no")<000000>

Display:

Enter article no
000000

User guiding with mask

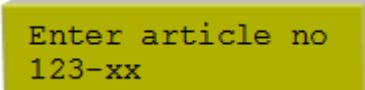

SOH	BM	[n]	=	U	M	(c	;	t	;	m	;	ap	;	ae	;	sp	;	d	;	ma)	t1	t2	t...	t70	ETB
-----	----	-----	---	---	---	---	---	---	---	---	---	---	----	---	----	---	----	---	---	---	----	---	----	----	------	-----	-----

- = UM identification user guiding with mask
- c start position for the entry
- t type of entry
 - 0 numerical
 - 1 alphanumerical
- m mode of entry
 - 0 do not jump over special characters
 - 1 jump over special characters
- ap alignment print
 - 0 aligned to the right side
- ae alignment entry
 - 0 aligned to the right
- sp prompt text for the variable, max. 24 characters
The entry has to be included in ".
- d deleting setpoint value
 - 0 setpoint value remains at key entry
 - 1 with first key press the setpoint value disappears
- ma definition of mask
possible mask characters are
 - 9 numbers only
 - # only numbers and leading signs
 - ? letters only
 - a alphanumeric characters (letters and numbers)
 - C any characters

Example:

Entry: = UM (1;0;0;0;0;"Enter article no." ;0;"999-aa")<123-xx>

Display:

Enter article no
123-xx

Memory card data

SOH	BM	[n]	=	M	D	(FN="filename"	;	SE='x'	;	CH=x	;	SC="x"	;	SF="x"	;	RC="x")	ETB
-----	----	-----	---	---	---	---	---------------	---	--------	---	------	---	--------	---	--------	---	--------	---	-----

= MD identification of memory card data

FN file name of table onto memory card with CSV data

SE Separator sign (default = ',')

CH column name in the first line (0 = no, 1 = yes)

SC name and/or number of column that should be referenced

SF field name and/or field index of field onto the label, which contains the searched data

RC name and/or number of column, which contains the data to be printed

Remark: If in parameter SF a field name is indicated, this must have been defined for the appropriate field by an AC attribute statement!

Example:

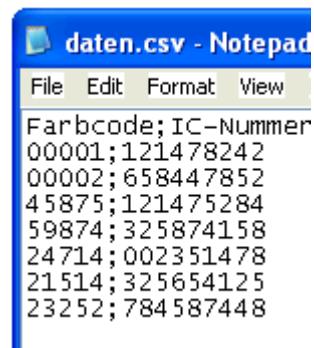

AC[1]NAME="FCODE"

BM[2]=MD(FN="a:\daten.csv";SE='';CH=1;SC="Farbcode";SF="FCODE";RC="IC-Nummer")

Field 1 Printout field Field 2

00001 121478242

23252 784587448

GS1-128 Parser

Note: By means of this variable type, the content of an application identifier in a GS1-128 bar code can be determined.

SOH	BM	[n]	=	A	I	(p	;	Ai)	ETB
-----	----	-----	---	---	---	---	---	---	----	---	-----

= AI identification of GS1-128 parser

p identification of the link element (field number)

Ai application identifier

Example: Field 1 ="00123456789012345675" GS1-128 with AI00

= AI (1;"00")

Printout: 123456789012345675

EPC calculation (Electronic Product Code)*

SOH	BM	[n]	=	E	P	C	(M	;	L	;	F	;	P	;	N1	;	{N2})	ETB
-----	----	-----	---	---	---	---	---	---	---	---	---	---	---	---	---	----	---	------	---	-----

= EPC identification of EPC calculation Kennung EPC Berechnung

M coding method
 L length of manufacturer number (company prefix)
 F filter value
 P verification of check digit
 N1 identification of link element (field number)
 N2 identification of link element (field number) - optional

Note: For more information, visit the following web sites: www.epcglobalinc.org or www.gs1.org

Parameter	Value range		
M	0 = Coding method SSCC96	3 = Coding method GRAI96	
	1 = Coding method SGTIN96	4 = Coding method GIAI96	
	2 = Coding method SGLN96		
L	6...12		
F	SSCC96	Filter value	Binary value
		All Others	000
		Undefined	001
		Logistical / Shipping Unit	010
	SGTIN96	All Others	000
		Retail Consumer Trade Item	001
		Standard Trade Item Grouping	010
		Single Shipping / Consumer Trade Item	011
SGLN	All Others	000	
		Physical Location	001
GRAI	All Others	000	
	All Others	000	
P	0 = no verification; 1 = verification of check digit		
N1	any		
N2	any		

Example 1: Field 1 = "00123456789012345675" GS1-128 with AI00
 Field 2 = AI (1;"00") Printout: 123456789012345675
 Field 3 = EPC(0;12;0;1;2) Printout: 3100DA7557D32C38E7000000

The EPC is calculated with the content of Field 2. The coding method SSCC96 is used. In Field 2 a valid NVE must be represented (18-digit, correct check digit).

Example 2: Field 1 = "4141234567890128254123" GS1-128 with AI00, AI254
 Field 2 = AI (1;"414") Printout: 1234567890128
 Field 3 = AI (1;"254") Printout: 123
 Field 4 = EPC(2;10;0;0;2;3) Printout: 3208499602D218000000007B

The EPC is calculated with the content of Field 2 and Field 3. The coding method SGLN96 is used. In Field 2 a valid ILN must be represented (13-digit). In the example, Field 3 contains an optional serial number. No verification of check digit of ILN (8) is effected.

* only when using option RFID

Check digit

SOH	BM	[n]	=	C	D	(d	;	s	;		t	;	w	;	m	;	r	;	o)	t1	t...	t70	ETB
-----	----	-----	---	---	---	---	---	---	---	---	--	---	---	---	---	---	---	---	---	---	---	----	------	-----	-----

= CD Identification of check digit

d Data for check digit calculation (field number of constant text)
Constant text is enclosed in "".

s Start position within data

1 ...n Start calculation at digit x

| Check digit type

- 0 Modulo 10 (weighting 3)
- 1 Modulo 11
- 2 Modulo 43
- 3 Modulo 47 (weighting 15)
- 4 Modulo 47 (weighting 20)
- 5 Modulo 103
- 6 Benutzerdefiniert

Optional parameters for customized check digit

w Weighting.

Constant text enclosed in "" - contains the individual weighting values or an interval.

Individual values: "x₁,x₂"

Interval: "x₁...x₂"

m Modulo

r Add result to

o Print only one digit

- 0 No
- 1 Yes

Example: Entry: =CD("123456789012";0;0;0)

Printout: 8

Entry: =CD("1234567890";0;0;6;"1,3";10;10;1)

Printout: 5

Substring

SOH	BM	[n]	=	S	S	(d	;	s	;	I)	ETB
-----	----	-----	---	---	---	---	---	---	---	---	---	---	-----

- = SS Identification of substring
- d Data used for substring extraction (field number or field name or constant text.
Constant text is enclosed in "".
- s Start position within data. If this parameter is omitted, the substring extraction starts with the 1st character of the data string.
- 1 n Start at digit x
- I Number of digits. If this parameter is omitted, all characters from the start position to the end of the data string are returned.
1 ...n At the start position x digits

Example:

Entry:	=SS("1234567890";4;3)
Printout:	456
	Field "ARTIKELNR" has the contents "370012330295"
Entry:	=SS(ARTIKELNR;1;4)
Printout:	3700

PARAMETER SETS

Layout parameters

Set layout length in 1/100 mm

SOH	F	C	C	L	-	-	r	N	N	N	N	N	N	N	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: value of layout length in 1/100 mm, 7 digit ASCII number

Enquire layout length in 1/100 mm

SOH	F	C	C	L	-	-	w	N	N	N	N	N	N	N	-	ETB

Interface

You can set the parameter of the serial interface by the following commands but you have to note that after sending one of the commands also the host computer changes the corresponding parameter of its interface to allow further communications Host computer – print module.

For all interface commands the interface is fixed with x. Allowed are the following values:

x = 1 ⇒ COM 1

x = 2 ⇒ COM 2

In all other cases automatically the first serial interface is addressed.

In the answers the addressed interface is also returned.

Set all interface parameter

SOH	F	C	F	F	x	-	r	m	;	b	;	p	;	d	;	s	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

m = mode (0 = Off, 1 = On, 2 = On, without error message)

b = Baudrate (2400, 4800, 9600, 19200, 38400, 57600, 115200)

p = parity (n = no parity, e = even parity, o = odd parity)

d = number of data bits (7, 8)

s = number of stop bits (1, 2)

Enquire all interface parameter

SOH	F	C	F	F	x	-	w	p	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	x	;	m	;	b	;	p	;	d	;	s	;	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Example: activate interface COM1 and set 9600 Baud, no parity, 8 data bits, 2 stop bits

[SOH]FCFF1-r1;9600;n;8;2[ETB]

Interface protocol

There are two different interface protocols available. Usually SOH = 01_{Hex} and ETB = 17_{Hex}. However there are host computers (e.g. AS/400), which can not work with these characters. Therefore you can switch SOH = 5E_{Hex} and ETB = 5F_{Hex}. The host computer has to change the corresponding parameter as well.

Set SOH and ETB

SOH	F	C	G	C	-	-	r	N	-	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N = 0 - SOH = 01_{Hex}, ETB = 17_{Hex}

N = 1 - SOH = 5E_{Hex}, ETB = 5F_{Hex}

Enquire SOH and ETB

SOH	F	C	G	C	-	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Data memory

Set data memory

SOH	F	C	G	D	-	-	r	M	-	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

- M = 0 Off, after receiving FBCA0r or FBDA0r the interface is locked until the end of the print order, i.e. you cannot write more data in the receiving buffer.
- M = 1 Standard, after starting a print order no data of the receiving buffer are processed but it is possible to write more data in the receiving buffer until it is full.
- M = 2 Extended, after starting a print order it is possible to write more data in the receiving buffer. These data is processed during the print and the next layout is prepared.

Enquire data memory

SOH	F	C	G	D	-	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	M	-	-	-	-	-	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Set reaction to unknown interrogative set

SOH	F	C	G	E	A	-	r	N	-	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N – Indication of value between 0 and 3

Enquire reaction to unknown interrogative set

SOH	F	C	G	E	A	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Set port transmission

SOH	F	C	G	F	-	-	r	S	T	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

S - Source (indication of source port)

T - Target (indication of target source)

Port numbers: 1 - 6

- Port number:
- 1 = COM1
 - 2 = COM2 (depending on printer)
 - 3 = LPT
 - 4 = USB
 - 5 = TCP (option)
 - 6 = UDP (option)

Enquire port transmission

SOH	F	C	G	F	-	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	"	S1-T1	;	S2-T2	;	...	ID	:	p	p	p	p	p	p	"	ETB
-----	---	---	-------	---	-------	---	-----	----	---	---	---	---	---	---	---	---	-----

Network

General

SOH	F	C	L	A	-	-	r	C	0	A	8	0	0	0	1	5	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

All network parameter sets start in the third column with a 'L'. Column 4 shows the identification for the corresponding network parameter. Column 5 can show another sub-identification.

Because of the fact that the argument size is limited to 8 characters, the IP addresses (IP address, network mask, gateway address) which consist of 32 bit are transmitted in HEX presentation. For all data which is transmitted in HEX presentation (also the MAC address) it is allowed to use capital as well as small letters.

In contrary to the parameter settings of the other interfaces, the settings of the following sets were saved immediately onto Flash, i.e. it is not necessary to save the currently set configuration before switching off the printer so the modifications are still available after switching on.

So that the made modifications become active, also without printer Reset it is necessary to transmit a corresponding Z set which effects a Reset of the network devices.

Set IP address (e.g. 192.168.0.21)

SOH	F	C	L	A	-	-	r	C	0	A	8	0	0	0	1	5	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Enquire IP address

SOH	F	C	L	A	-	-	w	C	0	A	8	0	0	0	1	5	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	C	0	A	8	0	0	1	5	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH A N - - - - - - p p p p p p p p p ETB

Assign printer name

SOH F C L F - - r N N N N N N N N N N N N N ETB

N: printer name is allowed to exist of max. 11 characters (A...Z, a...z, 0...9, -,)

Enquire printer name

SOH F C L F - - w p p p p p p p p p ETB

Answer

SOH A N N N N N N N N ; p p p p p p p p p ETB

Set MAC address (e.g. 00-07-4A-43-19-08)

SOH F C L M B - r 0 0 0 7 4 A - - ETB

SOH F C L M A - r 4 3 1 9 0 8 - - ETB

A MAC address has a width of 48 bit and is normally indicated in hexadecimals.

With a B record it is possible to modify our identification of the MAC address. All our machines start with 00-07-4A as default. This corresponds to the Memory-Pool which the MAC address committee assigned to us to guarantee that the MAC address is world-wide manufacturer-spreading unique. With the A record it is possible to set any address in our pool.

Enquire MAC address

SOH F C L M B - w 0 0 0 7 4 A - - ETB

SOH F C L M A - w 4 3 1 9 0 8 - - ETB

Answer

SOH A 0 0 0 7 4 A - - p p p p p p p p p ETB

SOH A 4 3 1 9 0 8 - - p p p p p p p p p ETB

NTP Server

NTP (Network Time Protocol) is a standardised Internet protocol permitting the synchronisation of real-time clocks of network participants. The printer connects itself with a time server and align every 60 minutes its internal real-time clock with that of the time server in order to correct possible differences.

The address of server (IP address) can be freely configured in the printer. The communication is effected by UDP and the fixed set port 123. The service in the printer is deactivated by transmitting the server address 0.0.0.0.

The time servers work together with the coordinated world time (UTC) and therefore an additional time shift is needed compared to the reference time. For Germany it is e.g. +1 hour.

The current state of the connexion can be queried with a status set.

Set NTP Server IP

SOH	F	C	L	N	I	-	r	N	ETB
-----	---	---	---	---	---	---	---	---	-----

N = X.X.X.X (X = 0...255)

Enquire NTP Server IP

Answer

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNN: value of printhead temperature, 3 digit ASCII number in 1/100 degree

Set transfer ribbon length

SOH	F	C	D	Q	A	-	r	N	N	N	N	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNNN: value of transfer ribbon length in m

Possible entries: 300, 450, 600, 900 or 1000

Enquire transfer ribbon length

SOH	F	C	D	Q	A	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Set transfer ribbon prior warning

SOH	F	C	M	L	A	-	r	N	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N = 0: Off

N = 1: On

Enquire transfer ribbon prior warning

SOH	F	C	M	L	A	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Set diameter for transfer ribbon prior warning

SOH	F	C	M	L	B	-	r	N	N	N	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNN = 030 ... 090 diameter in mm

Enquire diameter for transfer ribbon prior warning

SOH	F	C	M	L	B	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Set printhead resistance

SOH	F	C	M	G	-	-	r	N	N	N	N	N	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNNNN = Indication of resistance value in Ohm.

Enquire printhead resistance

SOH	F	C	M	G	-	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	N	N	N	N	N	-	-	-	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Mileage (kilometre) counter

It is only possible to enquire the kilometre values of print module and printhead by interface and not to set them to 0.

Enquire print module's mileage

SOH	F	C	H	A	-	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	N	N	N	N	N	N	N	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Enquire printhead's mileage

SOH	F	C	H	B	-	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	N	N	N	N	N	N	N	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNNNNNNN = Indication of mileage of print module res. printhead in meters
(e.g. '00000123' = 123 m)

Date & Time

Set date

SOH	F	C	I	A	-	-	r	D	D	M	O	Y	Y	D	W	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

DD = day of month

MO = month

YY = year

DW = day of week ('00' = Sunday)

Enquire date

SOH	F	C	I	A	-	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	D	D	M	O	Y	Y	D	W	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Set time

SOH	F	C	I	B	-	-	r	H	H	M	I	S	S	A	M	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

HH = hours

MI = minutes

SS = seconds

AM = mode ('am' = 12 hours mode AM, 'pm' = 12 hours mode PM, '—' = 24 hours mode)

Enquire time

SOH	F	C	I	B	-	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	H	H	M	I	S	S	A	M	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Automatically adjust clock for daylight saving changes

Because of the fact that there is no world-wide regulation if and when a changing of time between summer and wintertime (normal time) in the individual countries takes place, we distinguish between the following four formats for the definition for beginning and end of summertime.

F 0:	european format start of summertime = last Sunday in March end of summertime = last Sunday in October W: week (1 = first, ..., 5 = last) WD: day of week (0 = Sunday, ..., 6 = Saturday) MM: month (01 = January, ..., 12 = December)
F 1:	fix date with indication of year DD: day MM: month (01 = January, ..., 12 = December) YY: year
F 2:	fix date without indication of year DD: day MM: month (01 = January, ..., 12 = December)
F 3:	week day after day in month WD: day of week (0 = Sunday, ..., 6 = Saturday) DD: after day (only the first day is taken into consideration) MM: month (01 = January, ..., 12 = December)

Set automatically adjust clock for daylight saving changes

SOH	F	C	I	G	-	-	r	N	-	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Enquire automatically adjust clock for daylight saving changes

SOH	F	C	I	G	-	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	-	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N = 0 – Automatically adjust clock for daylight saving changes Off

N = 1 – Automatically adjust clock for daylight saving changes On

Set beginning of summertime

F 0: SOH F C I H - - r F W ; WD ; M M ; H H ; M M ETB
F 1: SOH F C I H - - r F D D ; M M ; Y Y ; H H ; M M ETB
F 2: SOH F C I H - - r F D D ; M M ; H H ; M M ETB
F 3: SOH F C I H - - r F WD ; D D ; M M ; H H ; M M ETB

Enquire beginning of summertime

SOH	F	C	I	H	-	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	F	W	W	D	M	M	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

The answer depends on each set format.

Set end of summertime

F 0: SOH F C I I - - r F W ; WD ; M M ; H H ; M M ETB
F 1: SOH F C I I - - r F D D ; M M ; Y Y ; H H ; M M ETB
F 2: SOH F C I I - - r F D D ; M M ; H H ; M M ETB
F 3: SOH F C I I - - r F WD ; D D ; M M ; H H ; M M ETB

Enquire end of summertime

SOH	F	C	I	I	-	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	F	W	W	D	M	M	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

The answer depends on each set format.

Set time shifting

SOH	F	C	I	J	-	-	r	N	N	N	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNN = minutes

Enquire time shifting

SOH	F	C	I	J	-	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	N	N	p	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Password

Set password

SOH	F	C	K	A	-	-	r	N	N	N	N	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNN: Indication of password, 4 digit ASCII number in mm (0000 ... 9999)

Enquire password

SOH	F	C	K	A	-	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	N	N	N	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Set function group

SOH	F	C	K	B	-	-	r	A	B	C	D	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

A - Function menu

0 = free

1 = blocked

B - Compact Flash card

0 = free

1 = only reading access

2 = access blocked

C - Entry

0 = free

1 = only masks blocked

2 = no entry possible

D - Print module guiding

0 = free

1 = entry of number of pieces possible

2 = no manual print release

Enquire function group

SOH	F	C	K	B	-	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	a	b	c	d	-	-	-	-	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Set password active

SOH	F	C	K	C	-	-	r	N	-	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N = 0 – inactive (N in display)

N = 1 – active (J in display)

Enquire password active

SOH	F	C	K	C	-	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Compact Flash Card

Save a label onto Compact Flash Card

SOH	F	M	A	O	-	-	r	F	ETB
-----	---	---	---	---	---	---	---	---	-----

- O - In case a label with the entered name exists already then the label is overwritten without an enquiry.
 If you enter another value as 0, an enquiry appears demanding if you want to overwrite.
- F - File name of the label which is to save. Drive and path name are optional, i.e. the file name is allowed to have more than 8 characters but is limited to 79.

Load a file from Compact Flash Card

SOH	F	M	B	-	-	-	r	F	ETB
-----	---	---	---	---	---	---	---	---	-----

- F - File name of file which is to load. Drive and path name are optional, i.e. the file name is allowed to have more than 8 characters but is limited to 79.

Delete a label from Compact Flash Card

SOH	F	M	C	-	-	-	r	F	ETB
-----	---	---	---	---	---	---	---	---	-----

- F - File name of label which is to delete. Drive and path name are optional, i.e. the file name is allowed to have more than 8 characters but is limited to 79.

Format Compact Flash Card

SOH	F	M	D	-	-	-	r	D	ETB
-----	---	---	---	---	---	---	---	---	-----

- D - Optional drive identification with colon (e.g. A:).
 In case no drive is indicated, then the currently selected is formatted.

Readout free memory space

SOH	F	M	H	-	-	-	w	X	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

X = Drive [A,B] (optional)

Answer:

SOH	A	X	n	n	n	n	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

X = Drive [A,B]

n = Memory space in KB

Create directory

SOH	F	M	I	-	-	-	r	P	ETB
-----	---	---	---	---	---	---	---	---	-----

P = Drive and directory identification

Create directory

(create directory without warning in case the directory is already existing)

SOH	F	M	I	O	-	-	r	P	ETB
-----	---	---	---	---	---	---	---	---	-----

O - In case a directory with the entered name already exists, then it is overwritten without an enquiry.

If you enter another value as O, an enquiry appears demanding if you want to overwrite.

P - Drive and directory identification

Delete directory

SOH	F	M	J	-	-	-	r	P	ETB
-----	---	---	---	---	---	---	---	---	-----

P = Drive and directory identification

Note that it is impossible to delete the current directory!

Change standard directory

SOH	F	M	K	-	-	-	r	P	ETB
-----	---	---	---	---	---	---	---	---	-----

P = Drive and directory identification

Readout standard directory

SOH	F	M	K	-	-	-	w	ETB
-----	---	---	---	---	---	---	---	-----

P = Drive and directory identification

Answer

SOH	A	P	ETB
-----	---	---	-----

P = Current directory

Set standard directory for file selection via I/O

SOH	F	M	K	B	-	-	r	N	ETB
-----	---	---	---	---	---	---	---	---	-----

N = directory path

Enquire standard directory for file selection via I/O

SOH	F	M	K	B	-	-	w	p	p	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	-	-	-	-	-	-	p	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Transfer file from printer

SOH	F	M	L	-	-	-	w	F	ETB
-----	---	---	---	---	---	---	---	---	-----

F - File name of file which is to transfer. Drive and path name are optional, i.e. the file name is allowed to have more than 8 characters but is limited to 79.

Answer:

SOH	A	F	*	S	ETB	<i>Data</i>
-----	---	---	---	---	-----	-------------

F = File name

S = File size in in Byte

Data = Binary data

Printing**Start /Stop command**

Additionally to the start / stop command it is possible to interrupt a print order via parameter / remote set.

SOH	F	D	-	-	-	-	r	N	-	-	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N = '0' – interrupt printing

N = '1' – continue printing

N = '2' – cancel print order, when it is already stopped

Reset error**Reset error**

SOH	F	C	M	H	-	-	r	N	N	N	N	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNNN = Indication of current error ID or "9999"

Enquire error

SOH	F	C	M	H	-	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	N	N	N	0	0	0	0	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Readout error ID and error text

SOH	F	C	M	H	A	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	N	N	N	;	error text	;	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	------------	---	---	---	---	---	---	---	---	-----

Item number of print order

By means of this command the Host computer can enquire following item numbers:

Complete number of current print order

SOH	F	B	B	A	-	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Number of layouts which are still to print

SOH	F	B	B	B	-	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Number of layouts which are already printed

SOH	F	B	B	C	-	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

At the end of one of these commands the print module returns the corresponding number as ASCII value
(4 res. 5 digits) in the answer set.

Answer

SOH	A	N	N	N	N	-	-	-	-	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

With this set it is also possible to transmit the item number of print order and the interval (in cutter mode) to the print module.

Item number of print order

SOH	F	B	B	A	-	-	r	N	N	N	N	N	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNNNN: 5 digits item number of order

Start printing

SOH	F	B	C	-	-	-	r	-	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

This command starts the print order which is actually set in the print module. The current parameter such as print mode, speed, initialisation etc. are used. Therefore it is possible to print e.g. item numbers with 5 digits. However, before you have to transmit the corresponding item number with set 'FBBA'.

SOH	F	B	E	-	-	-	r	n	n	n	n	n	n	n	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

With this command the printjob identifier which appears in "printing" res. "stopped" window is assigned to a print order. In case only blanks are transmitted, then the printjob identifier is deleted and the display shows "noname".

Initialisation of page handling

SOH	F	B	F	-	-	-	r	ETB
-----	---	---	---	---	---	---	---	-----

Selection of current page

SOH	F	B	G	-	-	-	r	N	ETB
-----	---	---	---	---	---	---	---	---	-----

N: current page number (1...10)

Select order of pages which are to print

SOH	F	B	H	-	-	-	r	P ₁	P ₂	P ₃	ETB
-----	---	---	---	---	---	---	---	----------------	----------------	----------------	-----

P₁; P₂; ... = pages which are to print

Generation of page without print start

SOH	F	B	I	-	-	-	r	S	ETB
-----	---	---	---	---	---	---	---	---	-----

With this command the corresponding page is only generated, i.e. no print start signal is sent.

S = 1: sorted (printed are e.g. pages 1-5, then again 1-5 etc.)

S = x: unsorted (printed are x times page 1, then x times page 2, etc.)

Feed

Release a layout feed

SOH	F	E	-	-	-	-	r	-	-	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Test print

Release a test print

SOH	F	F	-	-	-	-	r	-	-	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Status print

Parameter set in order to print status report

SOH	F	C	M	Q	-	-	r	N	-	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N = 0: Print module settings

N = 1: Bar codes

N = 2: Fonts

Cancel print orders

Cancel all active print orders

SOH	F	G	A	-	-	-	r	N	-	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N = -: Cancel active print orders and delete all label data

N = 1: Cancel active print orders and receive label data

With the execution of this command:

- possible upcoming errors are confirmed
- possible upcoming customised entries are cancelled

Remote console

Set port

SOH	F	C	R	A	-	-	r	N	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N = 0 – Off

N = 1 – COM1

N = 2 – Ethernet

Enquire port

SOH	F	C	R	A	-	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Set mode

SOH	F	C	R	B	A	-	r	N	N	N	N	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N = 0 – on demand

N = 1 – at each changing of display contents

N = 2 – interval

Enquire mode

SOH	F	C	R	B	A	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	N	N	N	-	-	-	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Set sending interval of display contents

SOH	F	C	R	B	B	-	r	N	N	N	N	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N = 500...5000 – sending interval in ms

Enquire interval of display contents

SOH	F	C	R	B	B	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	N	N	N	-	-	-	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Emulation

Set emulation

SOH	F	Z	-	-	-	-	r	N	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N = 0 – CVPL (Carl Valentin Programming Language)

N = 1 – ZPL II[®] (Zebra Programming Language)

Enquire emulation

SOH	F	Z	-	-	-	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

PARAMETER SETS FOR CONTINUOUS MODE

Machine parameters

Set operating mode

SOH	F	C	D	C	-	-	r	N	-	-	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N = 1: external I/O static

N = 3: external I/O static continuous

N = 5: external I/O dynamic

N = 6: external I/O dynamic continuous

Enquire operating mode

SOH	F	C	D	C	-	-	w	p	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Set print offset

SOH	F	C	A	D	L	A	r	N	N	N	N	N	-	-	M	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNNNN: print offset value

M: unit: 0 = print offset in 1/10 mm (00000...09999)

1 = print offset in 1/10 ms (00000...99999)

Enquire print offset

SOH	F	C	A	D	L	A	w	P	P	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	N	N	N	N	-	-	M	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNNNN: print offset value

M: unit: 0 = print offset in 1/10 mm

1 = print offset in 1/10 ms

Set material speed at print start signal

SOH	F	C	A	D	U	D	r	N	-	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: 0: Off; 1: On

Enquire material speed at print start signal

SOH	F	C	A	D	U	D	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: 0: Off; 1: On

Set encoder resolution

SOH	F	C	A	D	U	A	r	N	N	N	N	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: value of encoder resolution (0100...9999)

Enquire encoder resolution

SOH	F	C	A	D	U	A	w	p	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	N	N	N	N	-	-	-	-	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Set material feed per encoder turn

SOH	F	C	A	D	U	B	r	N	N	N	N	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: value of material feed in mm (0010...9999)

Enquire material feed per encoder turn

SOH	F	C	A	D	U	B	w	p	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	N	N	N	N	-	-	-	-	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Enquire material speed

SOH	F	C	A	D	U	C	w	p	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

By means of this command set it is possible to enquire material speed in mm/s. Please note that it is only possible to enquire the value and not to set.

Answer

SOH	A	N	N	N	N	N	-	-	-	-	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Ribbon save

Set ribbon save mode

SOH F C D R A - r N - - - - - - - - ETB

N = 0: Off

N = 1: standard

N = 2; stage 2

N = 2: stage 2
N = 3: manually

Enquire ribbon save mode

Answer

SOH A N - - - - - - p p p p p p p p p ETB

Set synchronisation of transfer ribbon and printhead

Set synchronization of transfer ribbon and printhead

NNN: Value of synchronisation in % (000-100)

Enquire synchronisation of transfer ribbon and printhead

Enquiry Synchronization of transfer ribbon and printhead

Answer

ANSWER: SOH A N N N - - - - - p p p p p p p p p ETB

Set time for printhead move down

Set time for printhead move down

NNNN: value of time for printhead move down in ms (0000...9999)

Enquire time for print

Enquire time for printhead move down

Answer

ANSWER: SOH A N N N N N - - - - p p p p p p p p p p p p p ETB

Set feedback distance

Set feedback distance

NNNN: distance in mm

Enquire feedback distance

Enquire feedback distance

Answer

SOH A N N N N N - - - - p p p p p p p p p p p p p ETB

Set feedback speed

SOH	F	C	D	R	F	B	r	N	N	N	N	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNNN: feedback speed in mm/s

Enquire feedback speed

SOH	F	C	D	R	F	B	w	p	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	N	N	N	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Set power of transfer ribbon motor

SOH	F	C	D	R	D	A	r	N	N	N	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNN: value of transfer ribbon motor power in % (010...200)

Enquire power of transfer ribbon motor

SOH	F	C	D	R	D	A	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	N	N	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Set brake power for acceleration and braking

SOH	F	C	D	R	E	A	r	N	N	N	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNN: value of brake power for acceleration and braking in % (000...200)

Enquire brake power for acceleration and braking

SOH	F	C	D	R	E	A	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	N	N	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Set brake power during printing

SOH	F	C	D	R	E	B	r	N	N	N	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNN: value of brake power during printing in % (000...200)

Enquire brake power during printing

SOH	F	C	D	R	E	B	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	N	N	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

I/O parameters

Set IN signal level

SOH	F	C	M	D	C	-	r	1	2	3	4	5	6	7	8	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

1-8 (inputs 1-8): 2 – increased and decreased
 1 – increased
 0 – decreased
 s – I/O signal by interface
 x – I/O signal blocked

Enquire signal level

SOH	F	C	M	D	C	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	0	1	2	3	4	5	6	7	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Set OUT signal level

SOH	F	C	M	D	D	-	r	1	2	3	4	5	6	7	8	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

1-8 (outputs 1-8): 1 – signal level 1
 0 – signal level 0
 s – I/O signal by interface
 x – I/O signal blocked

Enquire OUT signal level

SOH	F	C	M	D	D	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	0	1	2	3	4	5	6	7	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Set software input

SOH	F	C	M	D	F	-	r	1	2	3	4	5	6	7	8	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

1-8 (inputs 1-8): 1 – set software input
 0 – delete software input
 - – not considering software input
 p – pulse, execute software input once

Example: Enter a start impulse = FCMDF-rP-----

Enquire current status of software inputs

SOH	F	C	M	D	F	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	0	1	2	3	4	5	6	7	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Set software output

SOH	F	C	M	D	G	-	r	1	2	3	4	5	6	7	8	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

1-8 (outputs 1-8):

1 – set software output
0 – delete software output

Set start signal delay

SOH	F	C	S	D	D	-	r	N	N	N	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNN: start signal delay in 1/100 s (0...999)

Enquire start signal delay

SOH	F	C	S	D	D	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	N	N	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Set cancel continuous print (operating mode)

SOH	F	C	S	D	F	A	r	N	-	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: 0 = Off
1 = On

Enquire cancel continuous print (operating mode)

SOH	F	C	S	D	F	A	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	-	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Set output signal 'print ready' active

SOH	F	C	S	D	J	-	r	N	-	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: 0 = Off; at print start the 'print ready' signal is inactive.
1 = On; at print start the 'print ready' signal remains active.

Enquire output signal 'print ready' active

SOH	F	C	S	D	J	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	-	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N = current setting (see above)

PARAMETER SETS FOR INTERMITTENT MODE

Machine parameters

Set operating mode

SOH F C A D H - r N - - - - - - - - ETB

$N = 1$ – process single items

N = 2 – continuous

Enquire operating mode

SOH F C A D H - w p p p p p p p p p p p p p p ETB

Answer

SOH A N - - - - - - p p p p p p p p ETB

N: current operating mode

Set print speed

SOH F C A A - - r N N N - - - - - ETB

NNN: Indication of print speed in mm/s

It is necessary to transmit a 3 digit ASCII number

Enquire speed

Answer

SOH A N N N - - - - - p p p p p p p p p ETB

Set back speed

Set back speed | SOH F C A D G - r N N N - - - - - ETB

NNN: indication of back speed in mm/s (050...400)

Enquire back speed

Answer

SOH A N N N - - - - - p p p p p p p p p ETB

NNN: current back speed

Set print offset

SOH	F	C	A	D	L	A	r	N	N	N	N	N	-	-	M	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNNN: print offset in 1/10 mm (0000...9999)

Enquire print offset

SOH	F	C	A	D	L	A	w	P	P	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	N	N	N	N	-	-	M	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNNN: current print offset

Set ribbon save On/Off

SOH	F	C	D	J	-	-	r	N	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N = 0 – Off

N = 1 – On

Enquire ribbon save On/Off

SOH	F	C	D	J	-	-	w	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

I/O parameters**Set IN signal level**

SOH	F	C	M	D	C	-	r	1	2	3	4	5	6	7	8	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

1-8 (inputs 1-8):

2 – increased and decreased

1 – increased

0 – decreased

s – I/O signal by interface

x – I/O signal blocked

Enquire signal level

SOH	F	C	M	D	C	-	w	p	p	p	p	p	p	p	ETB

Set OUT signal level

SOH	F	C	M	D	D	-	r	1	2	3	4	5	6	7	8	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

1-8 (outputs 1-8): 1 – signal level 1
 0 – signal level 0
 s – I/O signal by interface
 x – I/O signal blocked

Enquire OUT signal level

SOH	F	C	M	D	C	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	0	1	2	3	4	5	6	7	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Set I/O protocol port

SOH	F	C	M	D	E	-	r	T	C	P	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Port: Off
 COM1
 COM2
 TCP

Enquire I/O protocol port

SOH	F	C	M	D	E	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	0	1	2	3	-	-	-	-	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Set software input

SOH	F	C	M	D	F	-	r	1	2	3	4	5	6	7	8	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

1-8 (inputs 1-8): 1 – set software input
 0 – delete software input
 - – not considering software input
 p – pulse, execute software input once

Example: Enter a start impulse = FCMDF-rP-----

Enquire current status of software inputs

SOH	F	C	M	D	F	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	0	1	2	3	4	5	6	7	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Set software output

SOH	F	C	M	D	G	-	r	1	2	3	4	5	6	7	8	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

1-8 (outputs 1-8): 1 – set software output
 0 – delete software output

Set debounce start signal

SOH	F	C	S	D	C	-	r	N	N	N	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNN: debounce time start signal in ms (0...100)

Enquire debounce start signal

SOH	F	C	S	D	C	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	N	N	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Set start signal delay

SOH	F	C	S	D	D	-	r	N	N	N	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

NNN: start signal delay in 1/100 s (0...999)

Enquire start signal delay

SOH	F	C	S	D	D	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	N	N	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Set cancel continuous print (operating mode)

SOH	F	C	S	D	F	A	r	N	-	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: 0 = Off
1 = On

Enquire cancel continuous print (operating mode)

SOH	F	C	S	D	F	A	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	-	-	-	-	-	-	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Set output signal 'print ready' active

SOH	F	C	S	D	J	-	r	N	-	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N: 0 = Off; at print start the 'print ready' signal is inactive.
1 = On; at print start the 'print ready' signal remains active.

Enquire output signal 'print ready' active

SOH	F	C	S	D	J	-	w	p	p	p	p	p	p	p	p	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

Answer

SOH	A	N	-	-	-	-	-	-	p	p	p	p	p	p	P	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

N = current setting (see above)

Save configuration permanent

In case you want to save the described settings permanent into the printer, then you have to transmit the following command to the printer.

SOH	F	X	-	-	-	-	r	N	-	-	-	-	-	-	-	ETB
N: 0 = save current parameter																
1 = set all parameters to default values																

Readout configuration

SOH	F	X	-	-	-	-	w	-	-	-	-	-	-	-	-	ETB
-----	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	-----

The printer sends as answer all current settings as parameter sets.

Status enquiry

Host computer can receive information about the printer by the serial interface.

The status enquiry has the following data format:

SOH	S	ETB	S = ASCII
-----	---	-----	-----------

Status return information:

After receiving the status enquiry the printer sends the corresponding status return information.

Data format of status enquiry

SOH	1. Byte	2. Byte	5. – 1. digit	ETB
	8 7 6 5 4 3 2 1	8 7 6 5 4 3 2 1		

1. Byte	=	1. status byte
		8. Bit = free 7. Bit = always set 6. Bit = free 5. Bit = 1 – active print order 0 – no. of pieces = 0 (no print order) 4. Bit = 1 – stop key activated 0 – stop key not activated 3. Bit = cutter error 0 – no error; 1 – error 2. Bit = labels 0 – no error; 1 – error 1. Bit transfer ribbon 0 – no error; 1 – error
2. Byte	=	2. status byte 8. Bit = free 7. Bit = free 6. Bit = free 5. Bit = free 4. Bit = free 3. Bit = memory card 2. Bit = mask set 1. Bit = printhead temperature
5.-1. position	=	number of pieces with 5 digits as ASCII characters min. '00000' / max. '65535'

AUTOSTATUS

The print modules are equipped with an auto status function, i.e. in certain operating modes the print module actively sends the corresponding status. This can be enquired by the serial interface.

To activate the auto status, the host computer has to send the following command to the print module:

SOH	G	1. Byte	2. Byte	ETB
-----	---	---------	---------	-----

Each of the below indicated message which is observed and send by the print module has to be transmitted with a set Bit (see table below 1. Byte and 2. Byte) to the print module via the auto state function. The print module sends after each performed condition the corresponding message (answer) to the host computer.

The following messages are provided:

1 Start of generation

2 End of generation

The print module sends this state in case data for a complete layout was generated. The test print was not taken into consideration.

For counters/date variables the print module sends for each layout a status cycle (start, end).

3 Start of printing

4 End of printing

The start of the print is send in case the generated data is send.

The end of the print is send in case the print of the layout is finished and the motor has stopped.

5 Start of cutting

6 End of cutting

This status describes the cutting. Here it is possible to check the end of the cutting at timeout
→ error.

7 Start of feeding

8 End of feeding

This status is send in case an additional feeding (dispenser, cutter, tear off) is released.

9 Start of a print order

10 End of print order

This status signalises the start and end of a complete print order (1...99999 layouts). This status is active in all operating modes.

11 Error

This status message is send in case an error occurs.

12 Printing stopped

This message is send if the printing is stopped.

13 Printing resumed

This message is send if the printing is resumed.

The print module sends the auto status in the following format to the host computer:

SOH	G	1. Byte	2. Byte	ETB
-----	---	---------	---------	-----

1. Byte

8. Bit	7. Bit	6. Bit	5. Bit	4. Bit	3. Bit	2. Bit	1. Bit
start generating	end generating	start printing	end printing	start cutting	end cutting	start feeding	always 0

2. Byte

8. Bit	7. Bit	6. Bit	5. Bit	4. Bit	3. Bit	2. Bit	1. Bit
end feeding	start print order	end print order	error	free	printing stopped	printing resumed	always 0

Attention: Bit 1 has to be in 1. Byte and 2. Byte always 0, otherwise the print module possibly could recognise SOH or ETB.

At the status message of the print module to the host computer always at least 1 Bit is set. However, it could be occur that several Bits are set at the same time.

At the status demand of the host computer to the print module it is also possible that several Bits are set at the same time.

The auto status demand is saved in the print module, i.e. it is set to 0 after switching off/on. Therefore it is necessary to demand it anew after each time the print module is switched on.

Example:

The print module should observe the start of a print order. For this the host computer sends the following demand to the print module:

SOH	G	00000000	01000000	ETB
-----	---	----------	----------	-----

After the condition is fulfilled (= start of the print order) the print module sends the following message to the host computer:

SOH	G	00000000	01000000	ETB
-----	---	----------	----------	-----

With regard to the contents the answer corresponds always to the format set.

1) descenders
2) standard

3) at the moment not available, can be replaced by vector fonts (ID3; ID11)
4) on demand, beginning with version 1.41a
5) on demand, only 200 dpi print modules
6) not available

Beginning with version 1.41a different character sets were offered but as default the print modules are equipped with Latin 1.

Following languages are supported:

Afrikaans	English	Italian	Serbian
Albanian	Estonian	Latvian	Slovak
Basque	Faeroese	Lithuanian	Slovenian

PCX format, example	30
PCX format, general information	29
Rotation.....	6
GS1 DataBar (RSS), mask set.....	21
GS1 DataMatrix, mask set.....	19
GS1-128 Parser	
Variable definition	42

H

Hotstart, parameter set.....	53
------------------------------	----

I

I/O parameters (continuous mode)	
Continuous print.....	78
IN signal level.....	77
OUT signal level.....	77
Software input.....	77
Software output.....	78
Start signal delay	78
I/O parameters (intermittent mode)	
Cancel continuous print	82
Debounce start signal	82
I/O protocol port	81
IN signal level.....	80
OUT signal level.....	81
Output signal 'print ready' active.....	78, 82
Software input.....	81
Software output.....	81
Start signal delay	82
I/O protocol port (intermittent mode), parameter set.....	81
IN signal level (parameter set)	
Continuous mode).....	77
Intermittent mode	80
Interface	
All interface parameters	54
Date memory	55
Interface protocol	54
Port transmission	55
SOH/ETB	54
Unknown interrogative set, reaction	55
Intermittent mode (parameter sets)	
Back speed	79
Cancel continuous print	82
Debounce start signal	82
I/O protocol port	81
IN signal level.....	80
Operating mode	79
OUT signal level.....	81
Output signal 'print ready' active.....	82
Print offset.....	80
Print speed	79
Ribbon save	80
Software impulse	81
Software output.....	81
Start signal delay	82
Interrogatibe sets (unknown), reaction	55
IP address (network), parameter set.....	56
ITF 14, mask set.....	15

K

Keyboard layout, parameter set	52
--------------------------------------	----

L

Label parameters	
Flip/rotate label	49
Labels	
Delete (Compact Flash card), parameter set.....	67
Load (Compact Flash card), parameter set.....	67
Layout change confirmation, parameter set.....	53

Layout parameters	
Column width	48
Contrast	47
Flip layout.....	48
Layout alignment.....	47
Layout length in 1/100 mm	46
Layout width in 1/100 mm.....	46
Layouts/cycle	46
Material selection	47
Number of columns.....	47
Printing lines	48
Rotate layout.....	48
Layouts	
Alignment, parameter set.....	47
Length in 1/100 mm, parameter set.....	46
Width in 1/100 mm, parameter set.....	46
Layouts/cycle, parameter set	46
Line, mask set	24
Lines (number), parameter set	48
Link field, variables	31
M	
MAC address (network), parameter set	57
Machine parameters (continuous mode)	
Encoder resolution	74
Material feed	74
Material speed	73, 74
Operating mode	73
Print offset.....	73
Machine parameters (intermittent mode)	
Back speed	79
Operating mode	79
Print offset.....	80
Print speed.....	79
Ribbon save	80
Mask set	
Aztec Code	23
Bar code.....	14
CODABLOCK F	20
DataMatrix.....	18
Example	27
Graphic internal.....	25
GS1 DataBar (RSS).....	21
GS1 DataMatrix	19
ITF 14.....	15
Line	24
MAXICODE.....	17
PDF417	16
QR Code	22
Rectangle	24
Text	13
Material	
Feed per encoder turn (continuous mode), parameter set	74
Selection, parameter set.....	47
Speed (continuous mode), parameter set	74
Speed at print start signal (continuous mode), parameter set.....	73
MAXICODE, mask set	17

Memory card data	
Variable definition	42
Mileage	
Print module, parameter set	62
Printhead, parameter set	62
Mode (remote console), parameter set	72
Mode selection, parameter set	50
N	
Netmask (network), parameter set	56
Network	
DHCP support.....	57
Gateway address	56
IP address	56
MAC address	57
Netmask	56
NTP Server IP	58
NTP status	58
Printer name	57
Reset network device.....	58
Time zone (hour offset).....	58
Transmission mode.....	57
NTP Server IP (network), parameter set	58
NTP status (network), parameter set	58
O	
Offset X, parameter set	46
Online/offline, parameter set	60
Operating mode (parameter sets)	
Continuous mode.....	73
Intermittent mode	79
OUT signal level (parameter set)	
Continuous mode).....	77
Intermittent mode	81
Output signal 'print ready' active (parameter set)	
Continuous mode.....	78
Intermittent mode	82
P	
Parallel data transmission	
Connection.....	5
General information	4
Parameter set	
Date/time.....	63
Test print	71
Parameter sets	
Cancel print orders.....	71
Compact Flash card.....	67
Continuous mode.....	73
Device parameters.....	50
Emulation.....	72
Error ID, readout	69
Error text, readout	69
Feed	71
Interface	54
Layout parameters	46
Machine parameters (intermittent mode).....	79
Network (option).....	56
Password	66

Quantity (print order).....	70
Remote console	72
Reset error	69
Service functions.....	60
Start printing.....	71
Start/stop command.....	69
Status print.....	71
Password	
Function group	66
Password	66
PDF417, mask set.....	16
Port transmission, parameter set	55
Print after measuring, parameter set.....	53
Print module language, parameter set	51
Print offset (parameter set)	
Continuous mode.....	73
Intermittent mode	80
Print orders (cancel), parameter set.....	71
Print position, parameter set	50
Print speed (intermittent mode), parameter set.....	79
Print start, parameter set.....	71
Printer name (network), parameter set.....	57
Printhead	
Resistance, parameter set.....	61
Temperature, parameter set	61
Printhead time (continuous mode), parameter set.....	75

Q

QR Code, mask set	22
Quantity (print order), parameter set	70

R

Readout, configuration	83
Rectangle, mask set	24
Remote console	
Interface	72
Mode	72
Sending interval (display contents).....	72
Reprint action, parameter set	60
Reset network device (network), parameter set.....	58
Ribbon save (intermittent mode), parameter set.....	80
Ribbon save mode (continuous mode)	
Brake power.....	76
Feedback distance.....	75
Feedback speed	76
Printhead move down time	75
Ribbon save mode	75
Synchronisation	75
Transfer ribbon motor power	76
Rotate layout, parameter set	48
Rotation	
Bar code.....	6
Graphic	6
Text	6
RS232	
assignment, cable	2
hardware handshake	2

S

Save permanent, configuration	83
Sending interval (display contents), parameter set	72
Sensors	
Compressed air.....	59
Cover condition	59
Serial data transmission	
Connection RS232.....	2
Connector assignment RS485/RS422.....	3
Connector assignment, DSUB socket	1
Xon/Xoff protocol	1
Service functions	
Mileage, print module.....	62
Mileage, printhead	62
Online/offline	60
Printhead open/closed	60
Printhead open/closed, parameter set.....	60
Printhead resistance	61
Printhead temperature	61
Reprint action.....	60
Transfer ribbon length.....	61
Transfer ribbon prior warning.....	61
Shift variable, variables	39
Software (continuous mode)	
Software input	77
Software output.....	78
Software (intermittent mode)	
Software input	81
Software output.....	81
SOH, parameter set.....	54
Standard directory, set via I/O	68
Start signal delay (continuous mode), parameter set.....	78
Start signal delay (intermittent mode), parameter set	82
Start/stop command, parameter set	69
Status	
Enquiry, data format.....	83
Print, parameter set	71
Return information, data format	83
Substring	
Variable definition	45
Summer/wintertime (parameter sets)	
Automatical adjustment.....	64
Summertime begin	65
Summertime end.....	65
Time shifting.....	65
Synchronisation (continuous mode), parameter set.....	75

T

Test print, parameter set	71
Text	
Mask set.....	13
Rotation.....	6
Set, example	27
Set, general information.....	26
Time zone (Network), parameter set.....	58
Time, parameter set	63
Transfer file from printer (Compact Flash card), paramter set.....	69

Transfer ribbon (parameter sets)	
Control.....	50
Length	61
Motor power (continuous mode), parameter set.....	76
Prior warning	61
Prior warning diameter.....	61
Transmission mode (network), parameter set.....	57

U

User guiding	
Parameter set	52
Variable definition	40
User guiding with mask	
Variable definition	41

V

Variables	
Check digit	44
Counter	32
Currency variable.....	38
Date/Time	34
EPC calculation.....	43
Extended counter.....	33
GS1-128 Parser	42
Link field	31
Memory card data	42
Shift variable	39
Substring.....	45
Text structure	31
User guiding	40
User guiding with mask.....	41
Vector fonts, font examples	98

X

X displacement (offset 3), parameter set	46
